

# Arizore Confirms \$50.1M Live Reserve as AZG and AZS Mint Completes On-Chain

## Verified Regulated Security Tokens Now Fully Issued, Visible, and Mirrored Through Live Reserve Infrastructure

[Sydney, 26/02/2026]. [Arizore](#) today confirms the successful on-chain minting and live reserve activation of its AZG and AZS tokens, representing a combined reserve value of **\$50,134,688**, now fully visible via the Arizore website and mirrored through its live reserve data infrastructure.

This milestone marks the formal transition of Arizore's reserve architecture from structured design to operational reality.

All tokens have been minted, issued, and confirmed on-chain. Reserve values, token counts, and aggregate reserve totals are now publicly visible and programmatically accessible through the live API layer.

---

## Reserve Confirmation

The live reserve currently reflects the following:

### [AZG \(Gold Reserve Layer\)](#)

- 8,000 tokens minted and in circulation
- \$5,000 per token
- Total reserve value: **\$40,000,000**

### [AZS \(Silver Reserve Layer\)](#)

- 130,400 tokens minted and in circulation
- \$77.72 per token
- Total reserve value: **\$10,134,688**

**Combined live reserve value: \$50,134,688**

All figures are mirrored directly from the live reserve system and reflect current on-chain issuance and reserve backing.

---

## A Reserve-First Architecture

Arizore is structured around a three-layer architecture designed to separate governance, reserve management, and token issuance.

The model is verification-led and delivery-anchored. Tokens are issued exclusively against verified reserve value and exist within a structured framework designed to align with institutional standards of clarity, segregation, and transparency.

The reserve strengthens only through verified asset inclusion. No issuance occurs without corresponding reserve value.

This structure is intended not to accelerate speculation, but to formalise recognition.

---

## Why This Matters

Across global capital markets, significant real-world asset value remains structurally under-recognised within traditional financial systems.

Arizore's approach is designed to make verified assets legible to institutional capital without forcing premature liquidity events or ownership transfer.

With the reserve now live and visible, Arizore moves from conceptual framework to operational infrastructure.

This milestone establishes:

- Confirmed on-chain issuance
- Live reserve visibility
- Transparent token-to-reserve alignment
- Programmatic data accessibility via API
- Structural separation between governance, reserve, and token layers

The result is a reserve model designed for long-term credibility rather than short-term momentum.

---

## Statement from George Boot, Chief Marketing Officer, Arizore

"Today's confirmation is not about token issuance alone. It is about infrastructure becoming visible.

The reserve is live. The tokens are minted. The values are transparent. The architecture is operational.

We have deliberately built this system around verification, separation, and discipline. The objective has never been speed. It's been structural clarity.

This is a foundational step toward a more transparent reserve-first model for asset recognition. It is not the result of a marketing cycle. It marks the formal operationalisation of the framework.”

---

## **A Measured Path Forward**

Arizore's strategy remains eligibility-led and institutionally aligned. Growth will continue to be governed by verification standards, jurisdictional discipline, and reserve integrity.

The live reserve does not represent a forecast or ambition statement. It reflects confirmed issuance against verified value.

With infrastructure now active and publicly visible, Arizore enters its next phase as an operational reserve system designed to support structured, asset-backed financial participation.

---

## **About Arizore**

Arizore is a reserve-first infrastructure platform designed to enable the recognition and structured mobilisation of verified real-world assets. Through its layered architecture, Arizore separates governance, reserve management, and token issuance to align with institutional standards of transparency, custody, and accountability.
